Jude Burnea

Full-Stack Web Developer

Sindangan, Zamboanga del Norte, Philippines | judeburnea20@gmail.com | +63 997 765 8905 | github.com/Burnzkie

SUMMARY

Entry-level full-stack developer (BSIT, 2026) who designs, tests, and deploys complete applications across Laravel/PHP, Node/React/TypeScript, and Python/FastAPI. Built a management system for a real student organization, a real-time Filipino Sign Language recognition app, and an AI-assisted job-application tracker. Comfortable with role-based auth, automated testing, Docker, and CI.

TECHNICAL SKILLS

Front-End: React, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS
Back-End: Laravel, PHP, Node.js, Express, Python, FastAPI, REST APIs
Databases: PostgreSQL, MySQL, Prisma, SQLAlchemy, Alembic
Auth & Testing: JWT, Laravel Sanctum, Google sign-in, role-based access, PHPUnit, Pytest
Deploy & Tools: Git, GitHub Actions, Docker, Render, Supabase, XAMPP
CMS: WordPress

PROJECTS

SOMS – Student Organization Management System

Laravel · PHP · MySQL · Sanctum · Tailwind CSS · Docker

- Built a web system for Philippine Advent College's Student Government Organization with Admin / Officer / Student roles, approval-gated registration, and officer appointment.
- Implemented multi-day events with QR-code check-in/out attendance, automatic per-event fine rules, announcements, a shared calendar, and in-app notifications.
- Built the electronic voting module and a hash-chained activity log that makes tampering detectable.
- Exposed a versioned REST API (Sanctum tokens) for a companion Flutter mobile app; covered by PHPUnit feature tests; Dockerized and deployed on Render.

Filipino Sign Language (FSL) Recognition App

React · TypeScript · Node.js · Express · PostgreSQL

- Built real-time sign recognition in the browser: hand tracking with DTW matching for motion signs, plus a speech-to-sign mode that matches multi-word phrases.
- Implemented Admin / Teacher / Student roles with JWT and Google sign-in, invite-gated teacher access, and a sign library with recording, upload, and draft/publish staging.
- Added a data-quality check that flags inconsistent recordings and text, plus an LLM translation feature (Groq API) with a local fallback.
- Shipped as an installable PWA on Render with Supabase Postgres and a 48-test backend suite; traced and fixed production bugs from server logs.

JobPilot AI – Job Application Manager

React · TypeScript · FastAPI · Python · PostgreSQL · Docker

- Built a job-application tracker with JWT auth, job and application CRUD with search, filters and pagination, resume upload, and duplicate-application prevention.
- Added AI features: cover-letter generation, resume parsing, and job / skill matching with recommendations, plus importers for Remotive and Arbeitnow listings.
- Structured the API in layers (routers, services, repositories, SQLAlchemy) with Alembic migrations, 61 passing Pytest tests, and GitHub Actions CI.
- Built the React/TypeScript front end with React Query and React Hook Form; Dockerized and deployed on Render.

EDUCATION

Bachelor of Science in Information Technology

Philippine Advent College Inc., Sindangan, Zamboanga del Norte | 2023 – 2026
Coursework in web development, database systems, software engineering, and network fundamentals.

LANGUAGES

English (Proficient) | Filipino / Tagalog (Native)
